Architects by ETSAM

Maintain an inclusive approach, avoiding urban policies and sectors dismantled. Cities must be committed to the fight against climate change, the local policies to reduce emissions in the transport and building are essential for improving the quality of life, both in the immediate environment as throughout the world. Being the subject of a major transport issues affecting the quality of life of citizens, the proposals should be based on strategies aggregate (municipal, regional or state) on sustainable mobility. The home should be treated as a crosscutting theme, linking it to other aspects without which makes no sense: social needs of the population and construction processes of the city. The recovery of existing buildings and reducing their impact. Environmental issues are important for improving the quality of life in cities
